SL NO.	NAME	REGD NO.	ROLL NO.
1.	GAURAV RAJ	12213201	RK22BHA24
2.	MOHAMMAD MAVIYA FARHATH	12212781	RK22BHA21
3.	DIVYANSHU SINGH	12215344	RK22BHA25

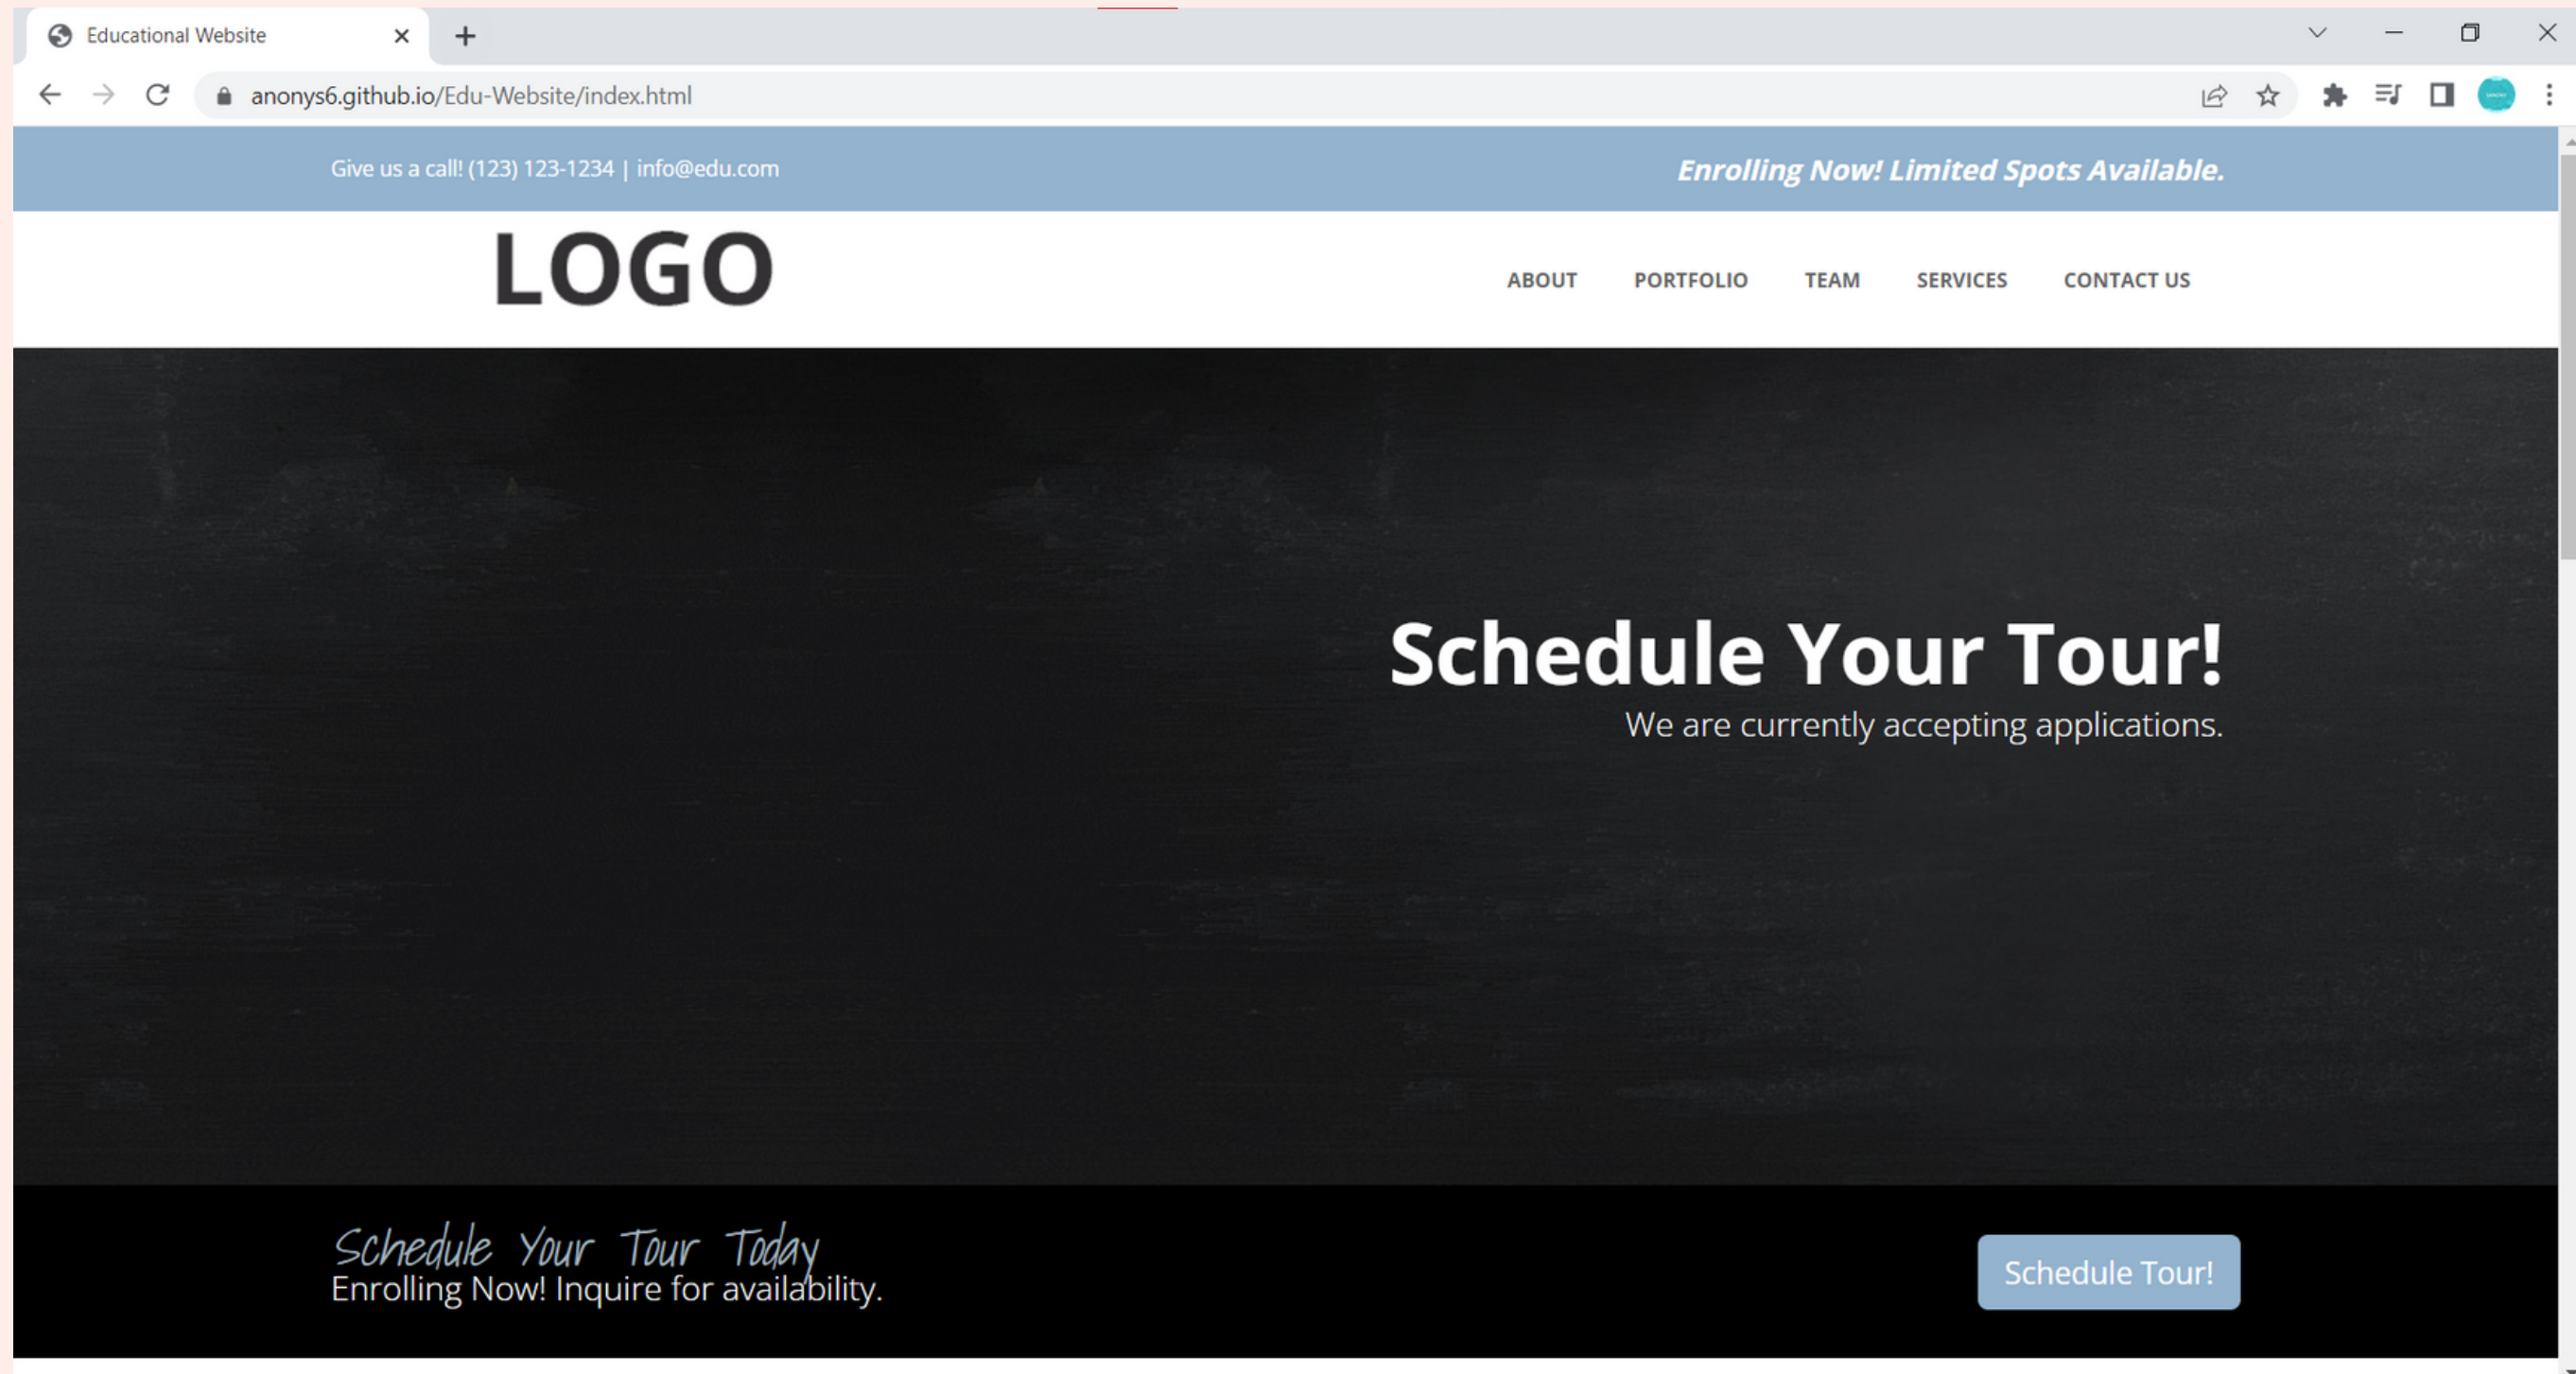

Introduction

Our website is an Educational website. Our website helps people to learn and understand things better. We are partners with many companies. Our page consists of 'about', 'portfolio', and many others. You can reach out to the team or contact them for help. Clicking on each option mentioned on the webpage will get open different details that are related to the heading given on a button that you click right before reaching another new page.

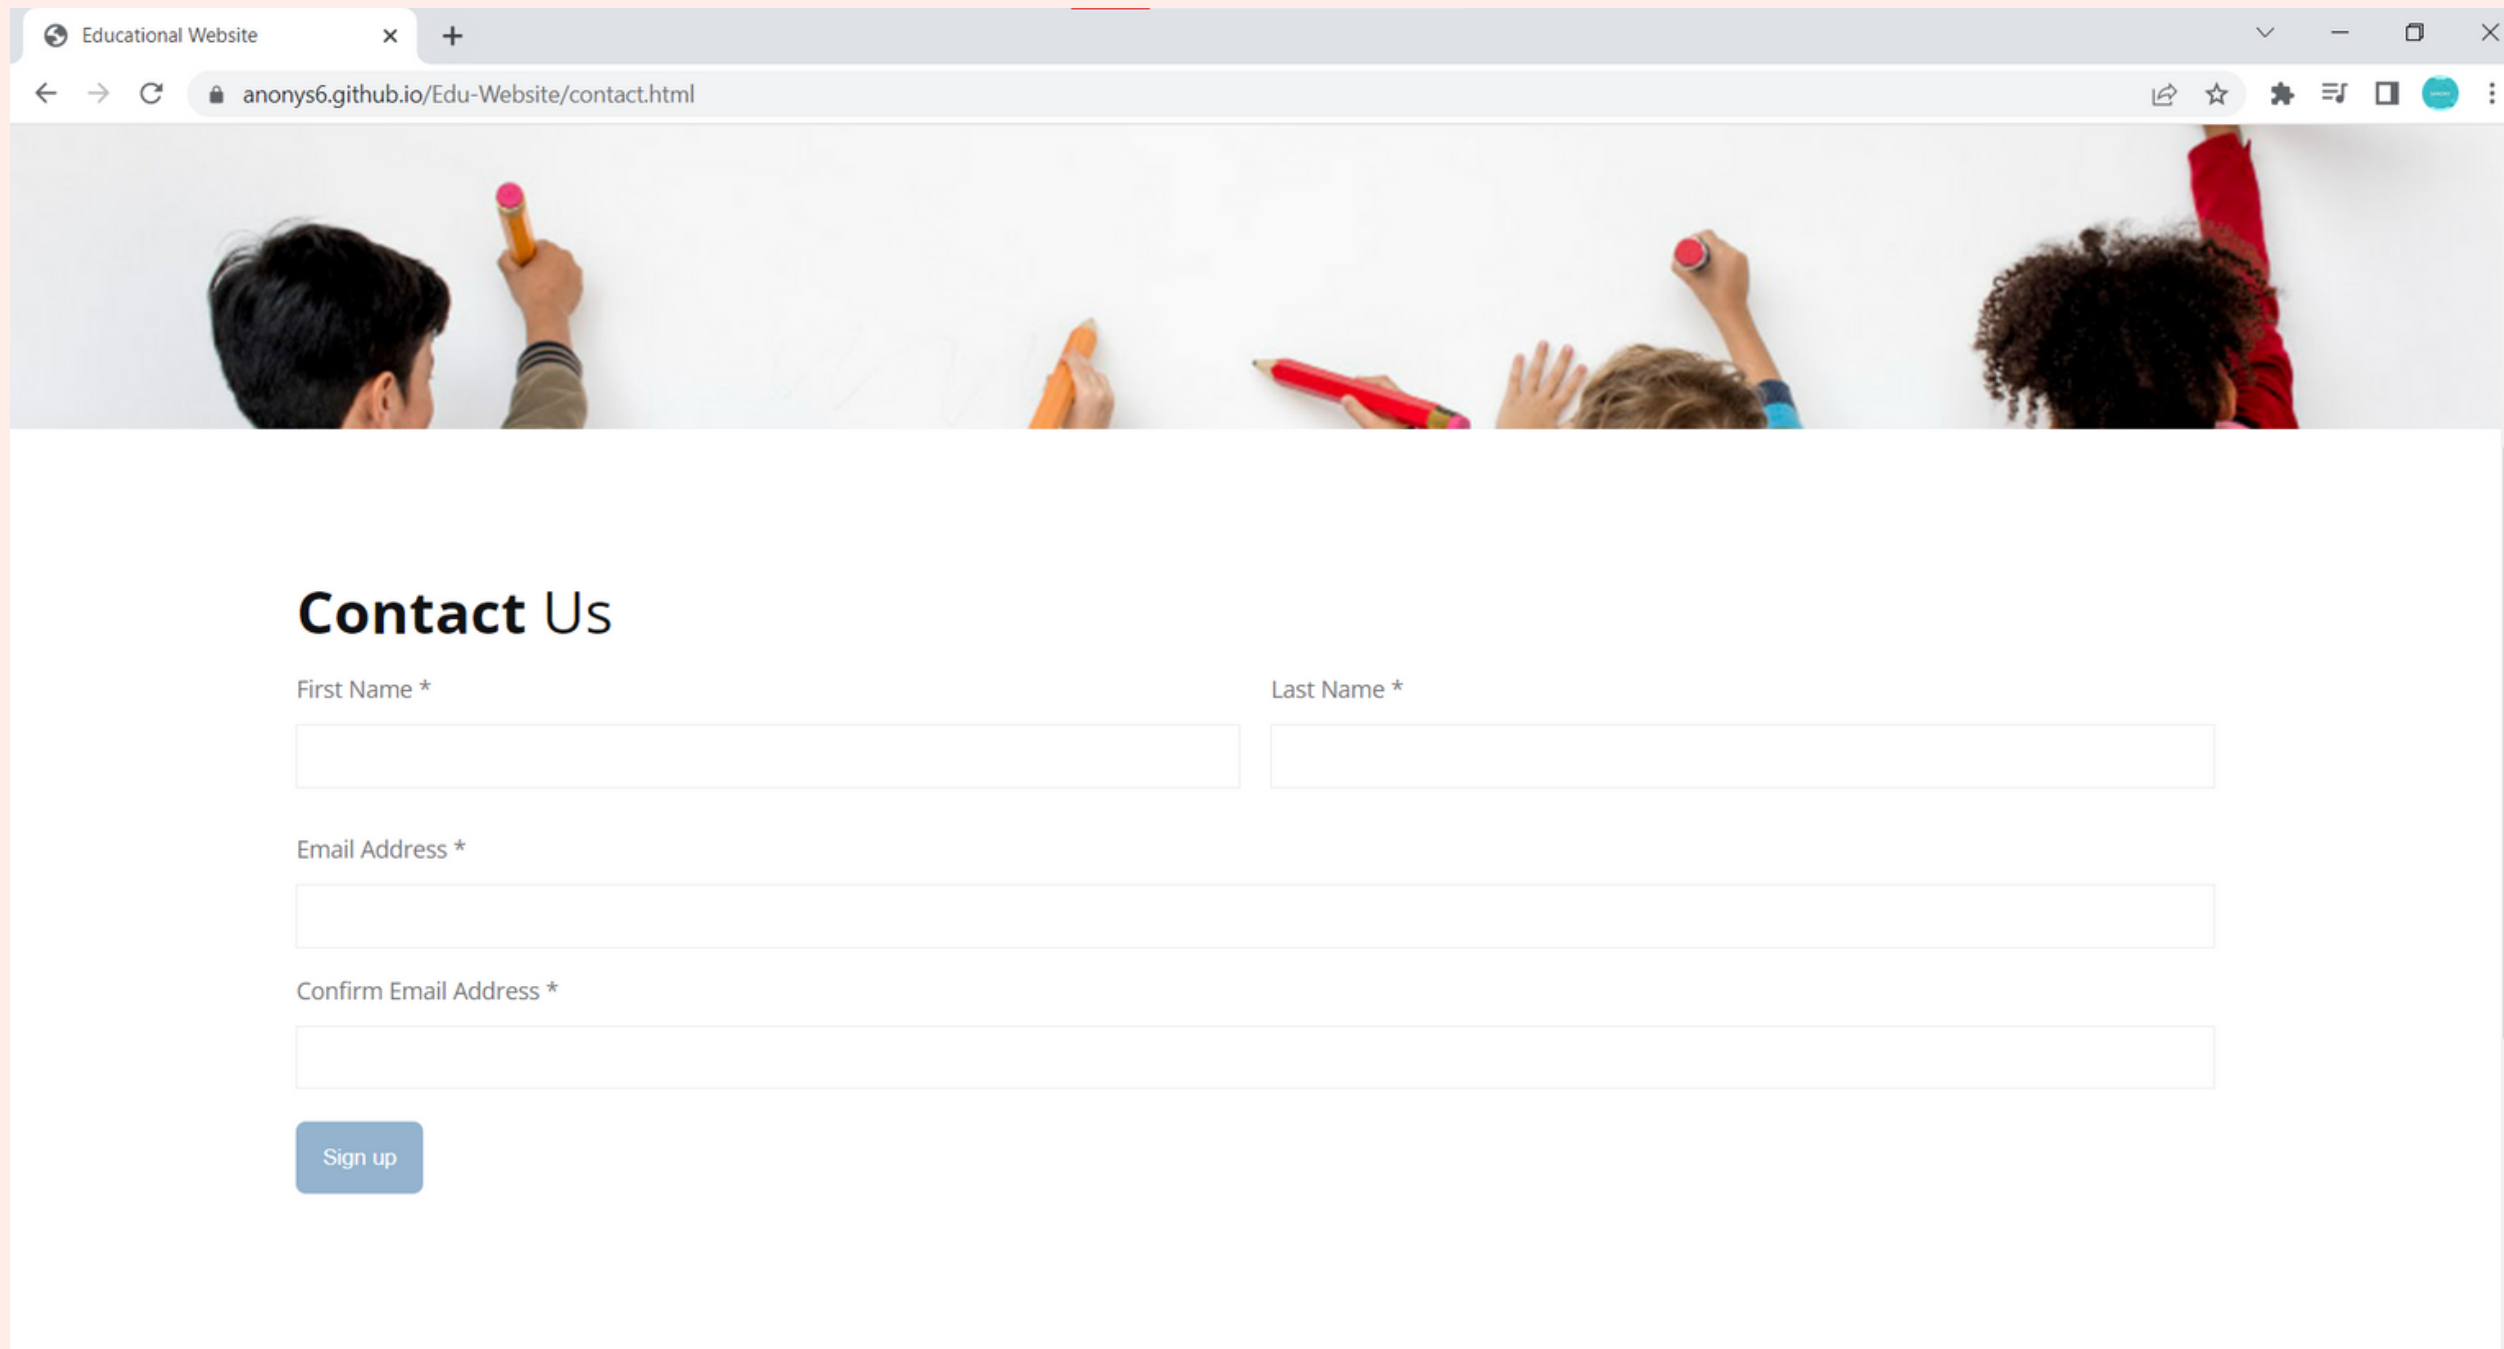

Objective

The objective of our website is to provide people with information about certain topics. And make them educated and literate. Our website helps people to learn more efficiently and easily. It is cost-efficient, as a lot of websites offer free learning content, and content is regularly updated.

Design

Pages used

The screenshot shows a web browser window with a single tab titled "Educational Website". The address bar displays the URL "anonyms6.github.io/Edu-Website/contact.html". The browser's toolbar includes navigation buttons (back, forward, refresh), a star icon for bookmarks, and a menu icon. The website's header features a wide image of children's hands drawing on a whiteboard. Below the header, the main content area is white and contains a "Contact Us" form. The form has a title "Contact Us" in bold black text. It includes four input fields: "First Name *" and "Last Name *" are side-by-side, "Email Address *" is below them, and "Confirm Email Address *" is below the email field. A blue "Sign up" button is positioned at the bottom left of the form area.

Contact Us

First Name *

Last Name *

Email Address *

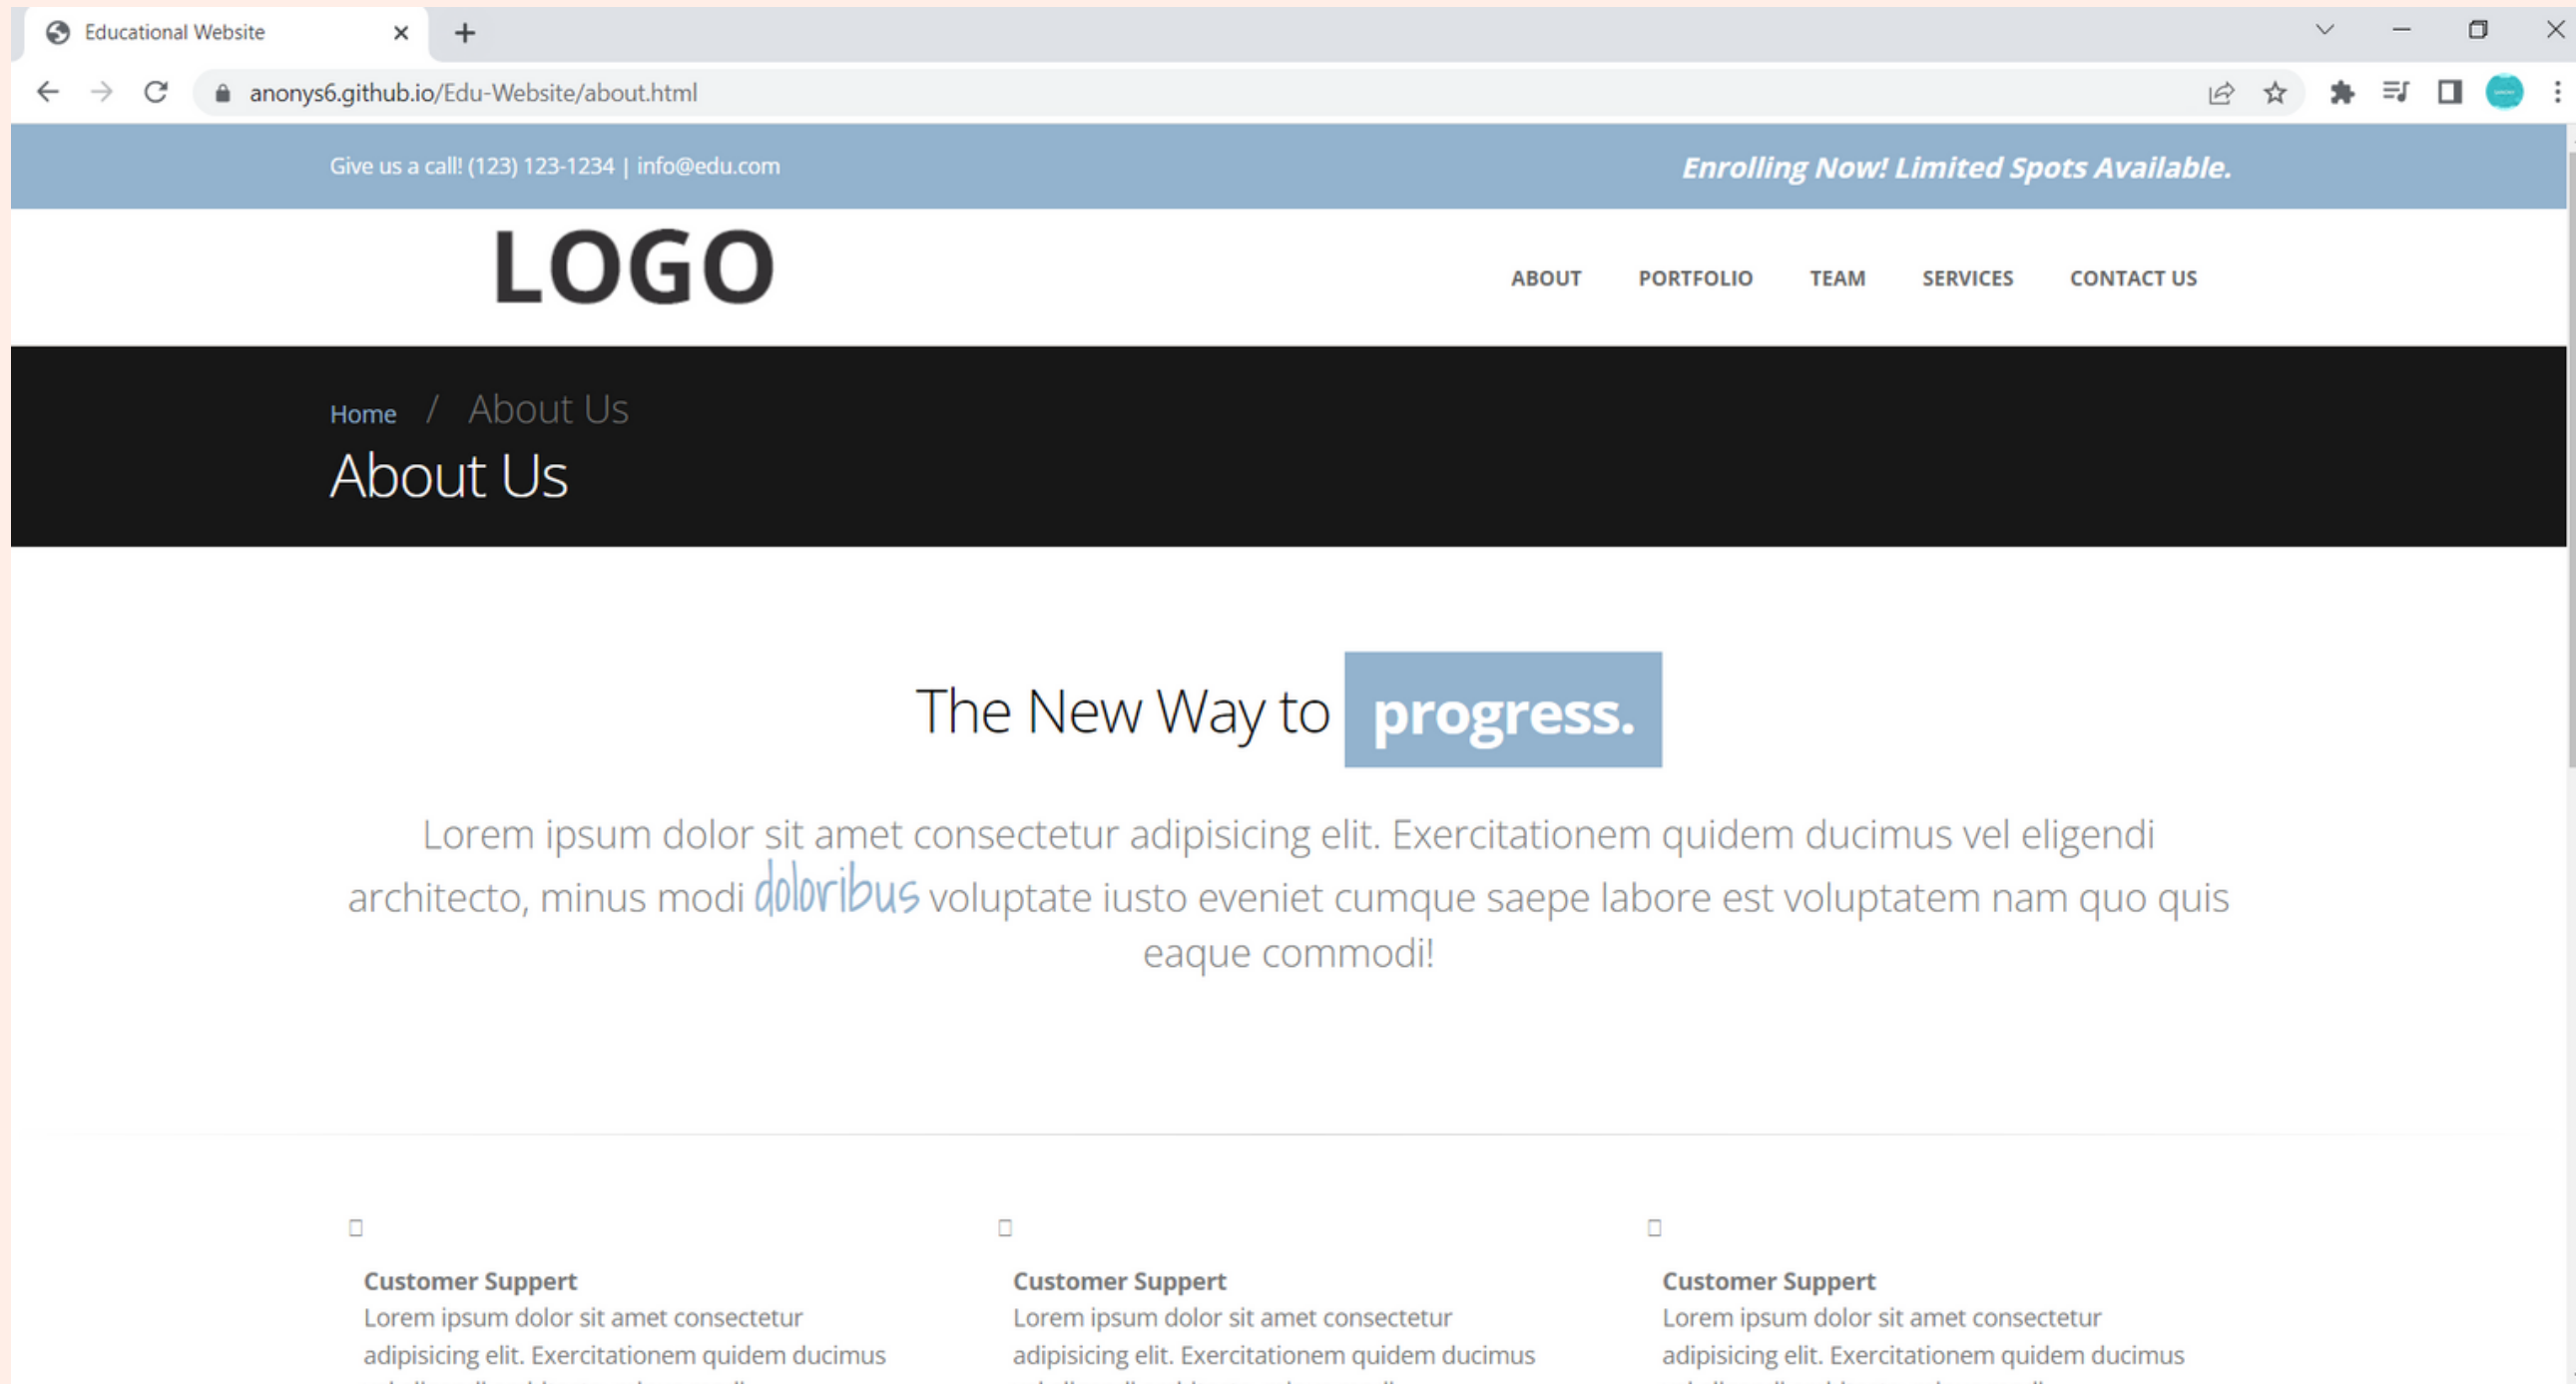

Confirm Email Address *

Technology used

SOFTWARE USED- Webpages can be created and modified by using professional HTML editors. However, for making this website we have used notepad as it is very simple software and visual studio code it provides basic support for HTML programming out of the box and there is syntax highlighting smart completions with IntelliSense, and customization formatting.

HARDWARE USED- This website was created with the help of RAM, ROM, PC

Result

Conclusion

While making the website we learned a lot, and we used almost all of our class learnings in this project. We made the simple code for the project. Later, we added styles and CSS to the code to make it stand out. From this project, we learned things in a better way like how to make a website using CSS. And we added different styles to each class and also learned in a proper practical manner.

We named sections differently to avoid confusion and then gave styles to them.
